

NBrace

Put Plants on the Fast Track to Higher Yields

NBrace seed treatment gives your soybeans superior protection against harmful early-season disease and insects. With three different fungicides and an insecticide, NBrace gives you broad spectrum disease and insect protection.

RECOMMENDED CROPS

Soybeans

FEATURES & BENEFITS

- Protection against early-season disease and insects
- Best-in-class fungicide and insecticide package
- Fludioxonil: a non-systemic fungicide with control of Rhizoctonia damping off, rhizoctonia seed rot, pythium, phytophthora and fusarium
- T-methyl: a systemic fungicide with control against rhizoctonia damping off and Phomopsis
- Mefenoxam: a systemic fungicide used to control pythium damping off and phytophthora
- Imidacloprid: a systemic insecticide proven to effectively protect beans from a broad range of harmful insects
- SeedWorx: a polymer coating designed for uniform coverage and reducing dust off, excellent seed flow, shiny quality finish with high opacity, and WOW factor appearance

DIRECTIONS FOR USE

NBrace is a pre-mix designed for use in commercial liquid seed treatment systems. The pre-mix contains the fungicides, insecticide, SeedWorx and a colorant.

Simply connect the keg to the slurry tank and set system to apply product at the suggested use rate.

Use Rate:

- 2.12 oz per 50 lbs of seed

Packaging:

- 15-gallon keg

ACTIVE INGREDIENTS PER CWT

FUNGICIDE

Fludioxonil* 4#	0.08 oz
T-methyl* 4.5#	0.28 oz
Mefenoxam* 4.1#	0.23 oz
